

Formatter

1. Apply the formatter settings:
 - a. Window -> Preferences
 - b. Java
 - i. +Code Style
 - ii. ++Formatter
 - c. Select Import and choose: eclipse.xml
 - d. Select OK

Save Actions

1. Configure the automatic Save: (This will help you avoid the dreaded Checkstyle errors that will fail the build)
 - a. Window -> Preferences
 - b. Java
 - i. +Editor
 - ii. ++Save Actions
 - c. Configure as follows:

Additional Save Actions

Code Organizing | Code Style | Member Accesses | Missing Code | Unnecessary Code

Formatter

☒ Remove trailing whitespace

☒ All lines

☐ Ignore empty lines

☐ Correct indentation

Members

☐ Sort members

☐ Sort all members

☒ Ignore fields and enum constants

 Reordering of fields and initializers can result in semantic and runtime changes.

The settings for sorting members can be changed on the Members Sort Order preference page.

```
import org.model.Engine;

/**
 * A Javadoc comment
 *
 * @since 2007
 */
public class Engine
{
    ... public void start()
    ... {
    ... }
}

... public void stop()
... {
... }
}

class SortExample
{
    ... private String foo;
    ... private String bar;
}

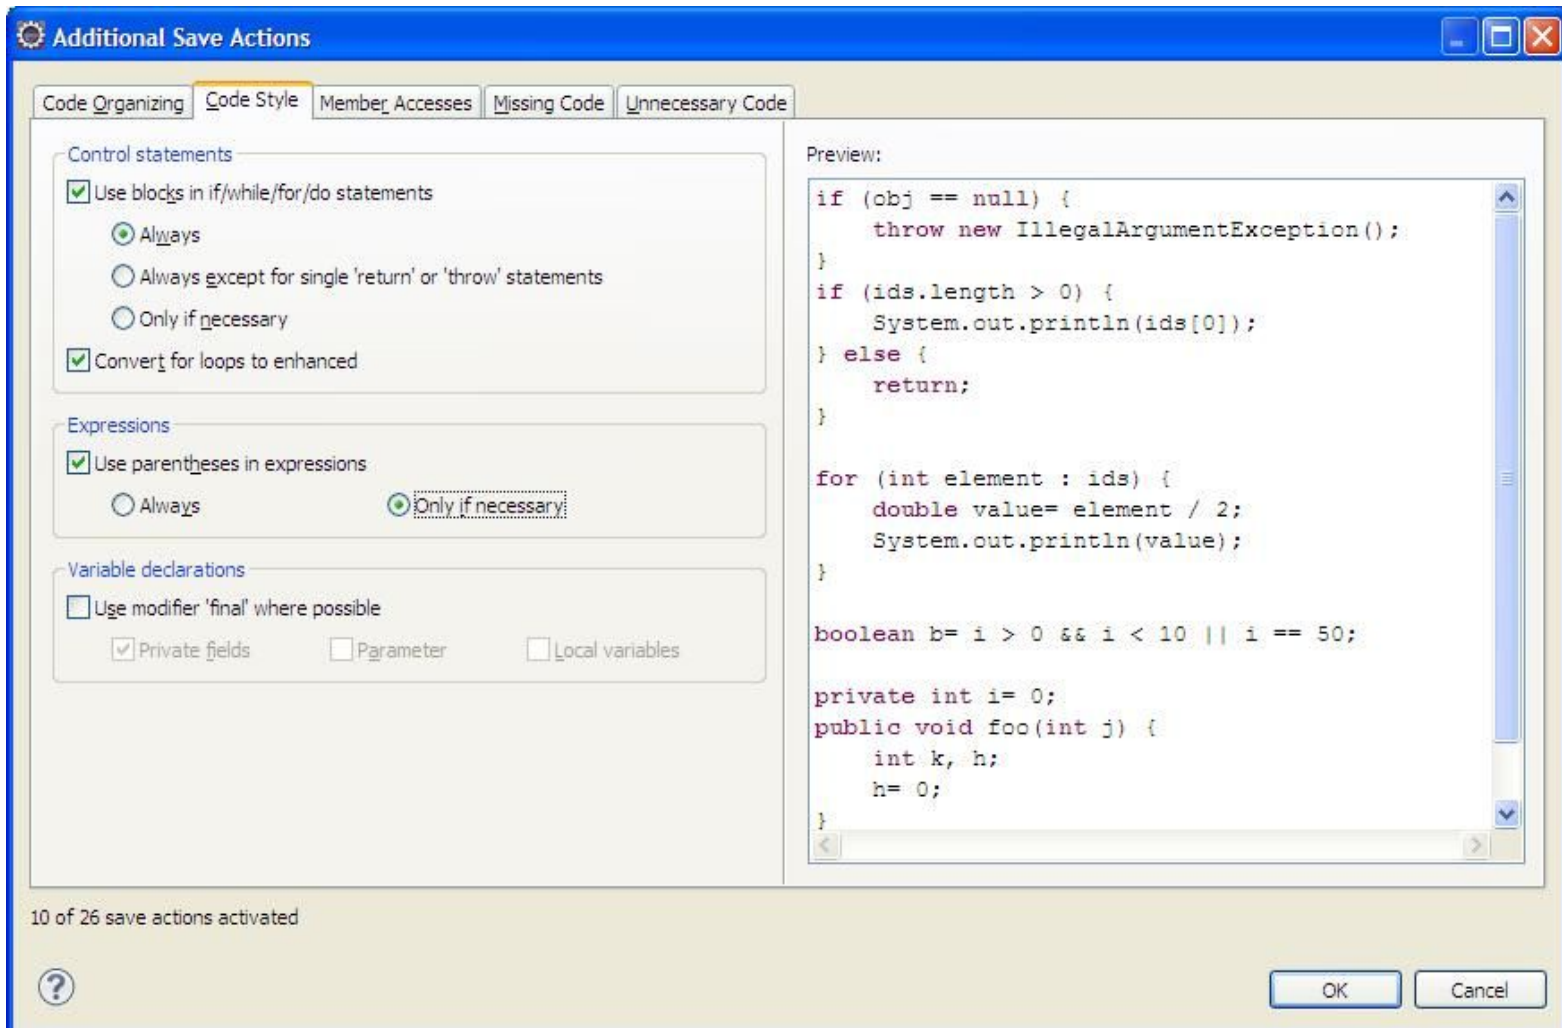

... private void foo()
```
